The chatbot was super intuitive to click between each part. My favourite part was the buttons and the effects when you press on them

the dropdown menu doesn't have icons, only words, I prefer it to have icons instead

its clear to me how to use it from beginning to end where i see the result. the restart button of the dropdown menu could be improved by being more prominent.

the dropdown menu's restart goes back to start, if it goes to the beginning of that, it's more convenient for users because they don't need to fill the personal information form again.

I liked how the speaker buttons can change, very good accessibility. But I didn't know the 3 circles are dropdown menu at first, telling users about that could be better

One of the most intuitive bot I've tried, super easy to use.

I like the dropdown menu because it's small and not distracting my view
